**Complex content management made simple**

The XML web-editor for everyone

Xeditor, is an online XML editor.   It enables you to create, edit, and review intelligently structured documents in XML format, without any technical knowledge.

Xeditor gives authors a familiar and intuitive way to write, collaborate, and review highly structured content in XML format. It allows your company to leverage all the benefits of intelligent content without the costly overhead of bringing authors and reviewers up-to-speed on complex XML data models.

With Xeditor, content is semantically enriched during creation and organised in XML format. This ensures that your content is correctly formatted for automated publishing processes.

Xeditor can be configured for any schema making it suitable for everyone in every industry sector.

Flexible architecture

Xeditor's flexible architecture allows for your developers (or ours) to implement the perfect editor for your organisation.

Xeditor is web-based, and its modern and open architecture also allows your developers to modify and extend Xeditor in any way they see fit.

Feature-rich, functional, and user-friendly

Beyond its reliable performance, Xeditor provides a wealth of tailored standard features.
Copy and paste functions, unlimited undo/redo, accurate searching, and advanced search/replace functions all enhance the authoring experience.

Additionally, the two most popular table models (HTML and CALS) are included, as well as footnotes, formulas, references, diagrams, media (images, video, etc.), and much more.

The user-friendly front end leads your authors intuitively through the defined document structure (XSD/DTD).

Xeditor allows multi-media publishing, the creation of technical documentation, contracts, and editorial publications.

The powerful developer framework can be customized and integrated into any other system (CMS, Google Drive, etc.).

The tool can be configured for your own schema or industry standards from technical documentation (DITA, S1000D), publishing (JATS, NLM, DocBook), and reporting (XBRL, ESEF)

Who is Xeditor for?

Xeditor is used in many industries and is as versatile as they are. The tool is web-based, light, yet as powerful as anything else in the market. Xeditor can be used by anybody, anywhere! Examples of its use are below.

Xeditor for aerospace and defence

Configured for S1000D, S2000D, ATA Spec 100/iSpec 2200

Xeditor helps create service and parts instructions and documentation in XML format and structures them granularly and semantically.

Intelligent author support intuitively guides authors through complex document structures and noticeably simplifies the review process.

Xeditor for academic & scientific publishing

Configured for industry standards JATS, TEI, and DocBook

Xeditor helps you pass documents and manuscripts on to other authors, editors, and proofreaders without any loss of quality or control.

Plug-ins, such as Edifix, are available to automatically check sources and bibliographic references saving valuable time.

Xeditor for contracts and legal documents

Configured for industry standards JATS, TEI, and DocBook

With Xeditor, contracts and legal documents can be created easily and edited by several people simultaneously. All changes and change requests are clearly visualized and logged through the change tracking and the comment system, which greatly simplifies the review process.

The XML format used by Xeditor guarantees a high-quality document structure, uniform formatting, and CI compliance.

Xeditor for manufacturing

Configured for industry standards DITA, DocBook, PI-Mod

Xeditor helps you to create manuals and documentation in XML format. To ensure the best possible reuse of information, it is structured and divided into granular information units called topics.

Intelligent author support intuitively guides authors through complex document structures. Various plug-ins, such as Acrolinx, ensure outstanding content quality.

Xeditor for the financial industry

Configured for industry standards ESF, XBRL, DocBook

As of January 1, 2020, all companies listed on a stock exchange are required to publish annual and financial reports and financial statements in a uniform European electronic format (ESEF).

Xeditor tags content semantically according to the ESEF specifications and organises it in XBRL format as it is created. Intelligent author support allows multiple users to work on a report at the same time, while providing intuitive guidance. This saves time, ensures compliance with ESEF requirements, and simplifies publication in XHTML format.

Why GPSL?

GPSL works with some of the world's largest organizations to solve mission-critical content challenges.

Our experience with Xeditor means that we can customise it for your specific requirement no matter what schema your organisation is working with. Get in touch for more information about how Xeditor can help your authors create, review, collaborate in an intelligently structured document (in XML) as easily as creating a word document.
